

The Claims

1. (currently amended) A wheel chair accessible crib permitting access by a wheel chair bound care giver, the wheel chair having a conventional maximum width and seat height, said crib comprising
 - a) at least two end supports spaced by a width greater than the maximum width of the wheel chair;
 - b) a central bed extending between said at least two end supports, said central bed portion having a lowermost extent which exceeds the seat height of the wheel chair by an amount sufficient to accommodate a lap of the care giver;
 - c) two side frame members for restraining an infant;
 - d) at least one of said side frame members having at least one bi-fold access door which [pivots] pivotally retracts out of the way in a manner to permit said wheel chair bound care giver to access the infant without interfering with the approach of the wheel chair.
2. (cancelled)
3. (currently amended) The wheel chair accessible crib of Claim [2] 1 wherein said at least one bi-fold access door comprises a pair of bi-fold doors which pivotally retract in opposite lateral directions.
4. (original) The wheel chair accessible crib of Claim 3 further comprising latch means securing said pair of bi-fold doors in closed position pending actuation by the care giver.
5. (new) The wheel chair accessible crib of Claim 4 wherein said latch means comprise first and second vertically aligned, independently operated, pivoting latches.
6. (new) The wheel chair accessible crib of Claim 5 wherein each said latch comprises a first portion mounted along a lateral edge of a first bi-fold door and a second portion mounted along an end surface of a second bi-fold door, each said second portion forming a slot, each said first portion having a tang which fit in said slot in said second portion.
